

# Which type of solar panel is best

## Overview

---

What are the different types of solar panels?

Solar Panels are of diverse types and capacities. Available types are Monocrystalline and Polycrystalline materials. The cost of polycrystalline solar panels is lower since they are less productive and efficient. Conversely, monocrystalline solar panels are more expensive and produce a higher output.

Which solar panels are best for your home?

Monocrystalline solar panels are considered best for the homes as they can make the best use of your space. You also need to consider your electricity needs while looking for a solar panel. Solar panels utilize sun energy while converting it into electric energy. These are often termed as the “PV Panels” as well.

Which type of solar panels are most efficient?

Most solar panels use silicon-based photovoltaic cells, with the most efficient type within this class being monocrystalline cells, made from a single pure ingot of silicon. Polycrystalline silicon cells, made from multiple silicon crystals bonded together, perform almost as efficiently as monocrystalline cells but are less expensive to produce.
